DNA ANALYSIS APPLICATION

REGISTRY RULES:

RULE 2, SECTION 3 DNA Typing

In order to provide the most accurate and complete records for the Registry all applying Foundation Moriesian breeding stock and all subsequent generations of Moriesians will require genotyping by a laboratory recognized by the Registry. The following rules apply:

- A. Foundation Moriesian mares and stallions must be genotyped (DNA) through the MHR. Geldings are excluded from requirement. DNA is required, however, for Moriesian geldings to participate in inspections and breed shows.
- B. All subsequent Moriesian to Moriesian generations must be DNA typed to prove parentage.
- C. All subsequent Moriesian to Friesian or Morgan (75%/25%) generations must be DNA typed to prove parentage.
- D. DNA hair kits will be provided at the owner or lessee's expense by the Register and shall be used under the rules provided by each kit.
- E. The MHR may, in certain instances, request genotyping for Friesian and Morgan sires and dams.

The Moriesian Horse Registry has established an agreement with The Regents of the University of California for parentage analysis of all nominated Moriesians. Upon receipt of this application and the appropriate fee of \$50 per horse the DNA typing materials will be sent to the owner or lessor. Following the directions the owner or lessor will submit hair samples directly to the Veterinary Genetics Laboratory. Results will be reported to the MHR. The lab requires that all samples and information relevant to a given parentage case arrive within a 30-day period.

I understand that the DNA report is the exclusive property of the Moriesian Horse Registry.
